

What Makes AtomicHost Different?

AtomicHost offers high performance, reliable hosting for anyone's needs, from a small project with a couple of friends, to a large scale network - We support it!

We focus on simplicity, speed, support and scalability - no nonsense, just hosting that works.

Performance

- With dual Intel Xeon CPUs, DDR4 memory, and a mix of SSD & HDD storage, you can count on consistently fast and reliable performance.
- With reliable networking, power backups, off-site backups, and multiple redundancy methods, your services stay online no matter what.

Fair Pricing

- Competitive affordable pricing whilst having premium support
- No hidden fees
- Flexible plan options

Easy to Use

- Simple, clean control panel that's easy to understand
- Deploy your first server in just a few minutes
- Full documentation and guides to help beginners get started

Real Support

- Actually helpful support, answers within 24 hours!
 - Real human answers, no copy and pasted answers!
 - Response times between 30 minutes -> 24 hours!!!
-

A Little About Us

Since the majority of the hosting companies I was using lacked the features I required, I founded AtomicHost. Instead of a service where you have to sift through countless Reddit threads to find what you're looking for, I wanted something dependable, easy to use, and truly helpful.

I've managed Minecraft servers before, so I understand what it's like to deal with jumbled setups and perplexing panels. I've had to battle through unintuitive user interfaces, malfunctioning configurations, and systems that made basic tasks much more difficult than they needed to be. In order to get things functioning properly, I eventually had to completely abandon the default panel and use plugins to manage my server.

AtomicHost is built to avoid all that.

Fin,

Owner Of AtomicHost

Our Goal

Our goal is to provide users with a simple yet extensive hosting experience, allowing for any small to large server to easily be hosted with high customisation!
