

Why is my CPU over 100%?

On some servers, your cpu may be set to a value above 100%. The reason for this is because 1 core = 100% CPU, so if you have 3 cores you will have 300% CPU, you can easily visualise how many cores you are using.

For an example, if you are running 200% CPU, you are using 2 cores.
