?How do i connect to my FiveM Server?

To connect to your server in FiveM, there are 2 main ways of doing so:

Search for your server

(May take up to 24 hours)

In the search menu, you can search for the name of your server you specified in the settings, or before you purchased the server.

Manually connect via the IP

(Will work instantly after the server has started)

In the search menu, type `>SERVER-IP`, make sure to include the `>` otherwise it will not work!

?How can i setup my server?

When your FiveM Server starts up for the first time, **you will see a URL in the console**, copy this URL and paste it into a new tab on your browser.

Follow the instructions on screen to make your server exactly how you like it!

??Error: Could not authenticate server license key. Invalid key format

This issue is caused by an `Invalid Authentication Key`, you can fix this by heading over to [keymaster](#) and getting a **free key** for your server.

When you have got a key, head over to the `Settings` page on your server, and paste the key into the `fivem license` box.

Click `Update` and then restart your server,

In some cases you may need to click `Reinstall`
