

?How do i connect to my FiveM Server?

To connect to your server in FiveM, there are 2 main ways of doing so:

Search for your server

(May take up to 24 hours)

In the search menu, you can search for the name of your server you specified in the settings, or before you purchased the server.

Manually connect via the IP

(Will work instantly after the server has started)

In the search menu, type `>SERVER-IP`, make sure to include the `>` otherwise it will not work!
