

??Why is my server not starting?

There are many factors which can determin why your server is not starting.

1. Check your startup script

“ you can check your startup script by heading over to the `Settings` page on your selected server

here is where you will be able to view your startup command. If this is blank, your server will not start up, and you will have to open a ticket to get this resolved.

2. Check the status of AtomicHost

“ On a rare occasion, the atomichost servers may be down, you can check over our status page [here](#)

If the `Servers/Node` are down, then you will be unable to access your server temporarily. If this is the case please allow a few hours for our services to come back online, and check our [discord](#) for more updates
